# WINE STELLAR

ADVANCED ARTIFICIAL INTELLIGENCE HAS OFFICIALLY ENTERED THE AT-HOME WINE CELLAR EXPERIENCE, AND IT'S OFFERING COLLECTORS A CUTTING-EDGE (AND STUNNING) WAY TO DISPLAY PRECIOUS VINO

BY AMANDA McCOY

**T**here's something romantic about a rustic, dark wooded wine cellar and dust on a vintage label, but this vanguard cellar design – replete with a real robotic arm and AI sommelier – is beckoning collectors everywhere to bring their bottles out of the basement and put them on full display. WineCab is a custom-crafted storage case that houses wine in a temperature and humidity controlled environment and employs a six-axis robotic arm to store and retrieve the bottles. Users can load bottles one at a time or via a 24-bottle drawer, and when it's time to drink, a personal AI sommelier is accessible via the iPad Pro and ready to grab your go-to California cab or special occasion Bordeaux. Highly secure facial recognition software and a customizable app ensure tip-top security. **1**
