From top: WineCab's ultrasleek aesthetic means that your prized vino collection no longer needs to be hidden away; WineCab founder and CEO Mark Chaney.

BOTTLE SERVICE

Combining the latest in robotic technology with access to a world-class network of experts, WineCab takes even the most dedicated oenophile's collection to another level.

By J.P. Anderson

Forget stowing those prized bottles of Château Margaux and Screaming Eagle in a musty cellar. With WineCab—the first robotically powered management system for wine collections—those bottles can be on brilliant display for all to see. Dreamt up by Calvary Robotics founder Mark Chaney, it's a must-have for any tech-loving oenophile: Boasting an AI “virtual” sommelier, temperature control, security settings and a robotic arm that gracefully maneuvers around the unit to select and dispense bottles within 15 seconds, WineCab can store up to 600 bottles at a time, and with facial recognition security it's easy to block access to particularly precious vintages. But sleek technology is just the start. WineCab also gives owners immediate access to a

network of global wine pros, who can assist with consulting, stocking and restocking, and purchases in the WineCab app. And the sleek, sophisticated design, which can be custom-fitted and finished with everything from exotic wood species and metal trims to personalized engravings, logos, crests and more, makes it a versatile fit for any space.

Notes Chaney, WineCab's founder and CEO, “While smart homes are moving past the early-adopter stage and being more readily embraced, we still don't see many robots in homes. That's one of the reasons I created WineCab, to introduce robotics into the home in an organic way. Our WineWall proudly puts your investment on display for everyone to see.” winecab.com
